SUMMARY

Senior Software Engineer, 8 years — I build and operate reliable production systems, not prototypes. I design, ship, and run **LLM-agent systems** (multi-agent orchestration, tool use, RAG, structured output, evals) on top of model APIs, and I ship **cross-platform mobile** — 15+ Flutter / Android / iOS apps at 100K+ installs, 99.5% crash-free. I built and operate a self-hosted multi-agent platform and open-sourced a multi-agent code reviewer with a measured evaluation benchmark. Provider-agnostic across Claude, OpenAI, and local models; broad across the full stack.

SKILLS

AI / LLM	Multi-agent systems & orchestration (custom · LangGraph · CrewAI) · tool use & function calling · MCP · RAG & vector search · embeddings · structured output · prompt engineering & caching · agent memory · model routing · evals (golden-dataset · LLM-as-judge) · LLMOps & observability · Claude · OpenAI · Ollama
Languages	Python · Dart · JavaScript / TypeScript · Kotlin · Java · Swift
Mobile	Flutter · React Native · native Android (Jetpack Compose · MVVM · Coroutines) · iOS · on-device & API LLM integration in mobile apps
Backend & infra	Flask · REST · Server-Sent Events · SQLite · Firebase · Linux · systemd · cron · CI/CD · Cloudflare Workers

EXPERIENCE

Software Engineer · Unify Technologies	Feb 2024 — Present
MOBILE · AI React Native + native Android development. Built an LLM-agent connection app bridging mobile clients to agent backends, and ADB session-handling tooling — production mobile work at the intersection of apps and agents.	
Senior Software Engineer · Robosoft Technologies	Dec 2022 — Jan 2024
MOBILE Built and shipped cross-platform and native mobile apps — React Native, Flutter, and native Android (Kotlin, Jetpack Compose, MVVM, Coroutines) — with Firebase, CI/CD, and analytics across client products.	
Senior Software Engineer · LoadShare Networks	Sep 2021 — Oct 2022
ANDROID Native Android development for a logistics platform — Kotlin, MVVM, and Coroutines — building and scaling features for delivery operations at scale.	
Software Engineer · Robosoft Technologies	Jul 2020 — Jul 2021
MOBILE Native Android and cross-platform (React Native / Flutter) feature development across client products, from build to Play Store release.	
Software Engineer · Advanced Voice Research Labs	Jun 2018 — Jun 2020
ANDROID · VOICE Android app development with voice and speech features — building mobile experiences around speech recognition and audio.	

SELECTED PROJECTS

Quorum — multi-agent code reviewer OPEN SOURCE · LIVE DEMO

A dispatcher routes a diff to specialist LLM agents (security, performance, correctness, tests, style) in parallel; a synthesizer consolidates one verdict. Provider-agnostic (Claude / OpenAI / Ollama), native structured output, a CI-gated detection-eval benchmark (recall / false-alarm scored), config-driven custom agents. The whole engine runs in-browser via WebAssembly. skmdroid.github.io/quorum

Aria — an AI operating system in the browser OPEN SOURCE · LIVE DEMO

A macOS-style web desktop with a multi-agent runtime: an orchestrator routes a goal to seven specialist agents that search the live web with citations, write and execute real code (Python on WebAssembly, sandboxed JS), and review one another — streamed into a live mission-control graph. Brain-agnostic: simulated, your API key, or a real LLM running entirely in-browser via WebGPU. sumanthkm.com/aria

Multi-agent ops platform PRODUCTION · 24/7

An LLM dispatcher routing tasks to specialist agents (triage, content, code execution, strategy), with a realtime task board (REST + SSE), per-task model routing, retries, heartbeats, idempotency, and agents that self-report via API.

Cross-platform app portfolio SHIPPED · PRODUCTION

15+ production apps (Flutter / Android / iOS) with Firebase, CI/CD, 15-language localization, and on-device + cloud AI — 100K+ combined installs at 99.5% crash-free.

EDUCATION

M.E. — Computing Technology & Virtualisation · Manipal School of Information Sciences

B.E. — Computer Science
