SUMMARY

Senior Mobile Engineer, 8 years — I build and ship production mobile apps, not prototypes. Deep in **native Android (Kotlin, Jetpack Compose), Flutter, and React Native** — 15+ apps at 100K+ installs, 99.5% crash-free, with Firebase, CI/CD, and 15-language localization. My edge is shipping **real AI/LLM features inside those apps** — on-device/local LLMs, RAG, and agent systems on top of model APIs (tool use, structured output, evals). Provider-agnostic across Claude, OpenAI, and local models; broad across the full stack.

SKILLS

Mobile	Native Android (Kotlin · Java · Jetpack Compose · MVVM · Coroutines) · Flutter · React Native · iOS · Firebase · Play Store release · 15-language localization · on-device & API LLM integration in apps
AI / LLM integration	On-device / local LLMs · RAG & vector search · multi-agent systems & orchestration (custom · LangGraph · CrewAI) · tool use & function calling · MCP · structured output · prompt engineering · evals · Claude · OpenAI · Ollama
Backend & infra	Flask · REST · Server-Sent Events · SQLite · Firebase · Linux · systemd · cron · CI/CD · Cloudflare Workers
Languages	Kotlin · Java · Dart · Swift · Python · JavaScript / TypeScript

EXPERIENCE

- Software Engineer · Unify Technologies

Feb 2024 — Present

MOBILE · AI React Native and native Android development on production mobile apps — including LLM/agent integration and Android device-session tooling.
- Senior Software Engineer · Robosoft Technologies

Dec 2022 — Jan 2024

MOBILE Built and shipped cross-platform and native mobile apps — React Native, Flutter, and native Android (Kotlin, Jetpack Compose, MVVM, Coroutines) — with Firebase, CI/CD, and analytics across client products.
- Senior Software Engineer · LoadShare Networks

Sep 2021 — Oct 2022

ANDROID Native Android development for a logistics platform — Kotlin, MVVM, and Coroutines — building and scaling features for delivery operations at scale.
- Software Engineer · Robosoft Technologies

Jul 2020 — Jul 2021

MOBILE Native Android and cross-platform (React Native / Flutter) feature development across client products, from build to Play Store release.
- Software Engineer · Advanced Voice Research Labs

Jun 2018 — Jun 2020

ANDROID · VOICE Android app development with voice and speech features — building mobile experiences around speech recognition and audio.

SELECTED PROJECTS

Quorum — multi-agent code reviewer OPEN SOURCE · LIVE DEMO

A dispatcher routes a diff to specialist LLM agents (security, performance, correctness, tests, style) in parallel; a synthesizer consolidates one verdict. Provider-agnostic (Claude / OpenAI / Ollama), native structured output, a CI-gated detection-eval benchmark (recall / false-alarm scored), config-driven custom agents. The whole engine runs in-browser via WebAssembly. skmdroid.github.io/quorum

Aria — an AI operating system in the browser OPEN SOURCE · LIVE DEMO

A macOS-style web desktop with a multi-agent runtime: an orchestrator routes a goal to seven specialist agents that search the live web with citations, write and execute real code (Python on WebAssembly, sandboxed JS), and review one another — streamed into a live mission-control graph. Brain-agnostic: simulated, your API key, or a real LLM running entirely in-browser via WebGPU. sumanthkm.com/aria

Multi-agent ops platform PRODUCTION · 24/7

An LLM dispatcher routing tasks to specialist agents (triage, content, code execution, strategy), with a realtime task board (REST + SSE), per-task model routing, retries, heartbeats, idempotency, and agents that self-report via API.

Cross-platform app portfolio SHIPPED · PRODUCTION

15+ production apps (Flutter / Android / iOS) with Firebase, CI/CD, 15-language localization, and on-device + cloud AI — 100K+ combined installs at 99.5% crash-free.

EDUCATION

M.E. — Computing Technology & Virtualisation · Manipal School of Information Sciences

B.E. — Computer Science
